Department of Fabric Engineering

FE 254-0723: Fabric Manufacturing

Sign:

Name:

ID:

Exp. No: 04

Dept:

Date:

Name of the Experiment: Study on High-Speed Warping Machine and Related Calculations

Keywords: Creel, Headstock, Ballon breaker, guide reed, v-reed, beam bracket, fan, measuring device, speed controller, pressure roller, Automatic knock off, yarn breakage indicator

1. Sketch the side view and yarn path diagram of a high-speed warping machine?

Fig 1: side view of a high-speed warping machine

Fig2: Yarn path of high-speed warping machine

2. What is creeling ?

3. Types of creeling?

TRUCK CREEL

MAGAZINE

TRAVELLING PACKAGE

4. if you consider the fabric construction number of required fabric $\frac{40 \times 30}{80 \times 60} \times 62''$ calculate the the following parameters.

Assume, creel capacity 760, capacity of the warper's beam =20000 m

capacity of the weaver's beam =4000 m Required amount of fabric =80000 m, warp wastage=15%

- i. Total no of ends (weavers beam) =
- ii. Total no of pre beam (Warpers beam) =
- iii. Total no of ends per pre beam =
- iv. Creel capacity utilization =
- v. Length of pre beam =

5. What is the major difference between sectional and high-speed warping?
